Rafly Mahendra

Back-End Developer | Building Efficient & Scalable Technology
Solutions
Bandung, Jawa Barat, Indonesia

Ringkasan

I am a Junior Developer with a bold vision for the future of
technology. Driven by a passion for coding and innovation, I am
focused on mastering skills in TypeScript, JavaScript, and Go to
build solutions that challenge the status quo. I believe that the next
generation of transformative startups will be driven by those who are
unafraid to think differently, disrupt industries, and push boundaries.

Currently, I specialize in building modern web applications,
developing scalable back-end systems, and integrating the latest
technologies such as React, Go, and the Gin framework. While I am
at the beginning of my journey, my ambition is to eventually lead my
own tech startup, leveraging my technical skills and entrepreneurial
mindset to create products that make a meaningful impact.

I am constantly learning, iterating, and staying ahead of trends,
as I believe that innovation is fueled by the willingness to question
the conventional and take risks. I am excited about opportunities
to collaborate with like-minded professionals who share the same
passion for challenging norms and creating the future.

Skills:

Programming (TypeScript, JavaScript, Go, Golang)

Web Development (React, Node.js)

Backend Development (Go, Gin Framework)

Database Management (MySQL, PostgreSQL, MongoDB)

Problem Solving & Algorithmic Thinking

I'm always looking for opportunities to collaborate, learn from others, and contribute to the next big thing in technology. Let's build the future, together.
